

IMPRS UFAST skills course

Project and Time Management for Scientists

Alexander Britz

By pursuing a PhD in cutting-edge science, you started a huge project, which can sometimes feel like a drive through death valley. Effective time-, self- and project management skills can help you to be organized and efficient. Ultimately this will allow you to be successful and achieve your milestones and goals.

In this course you will train to use self and time management techniques to structure your daily life as a young scientist. Furthermore, you will learn about project management techniques – traditional and agile – and we will discuss how these can be applied to writing a manuscript or thesis, and even managing a full scientific project like your PhD, from start to end.

8th – 9th July 2025

09:30 h – 16:30 h

Building 900

Seminar room O1.020

Register on Geventis I-UF PTM
