IMPRS UFAST skills course

Reproducibility & Data Management

Hans Fangohr, Carsten Putzke

In this mini-course, you will hear two lectures from experienced scientists. There will be time for you to ask questions and discuss with them.

H. Fangohr: Reproducibility in Science – Ambition and Pragmatism: What is reproducibility, why does it matter, and (why) is it hard to achieve? I will outline the key requirements for reproducibility and show how they relate to practical steps we can take to make our research more reproducible and reusable. Along the way, we will explore tools and services that can help us weave reproducibility into everyday research practice, including Git, Zenodo, Edmond, and Jupyter Notebooks.

C. Putzke: Whether you are starting your PhD or finishing it, you will face the challenge of handing over data and information. I will showcase how our group builds a long-term memory of research work and data, enhancing reproducibility and enabling the adoption of best practices.

17th November 2026
10:40 h – ca. 14:30 h

Bldg. 900 (MPSD)
EG.136
