

IMPRS UFAST skills course

Communication and Conflict Management

Alexander Britz

Do you work in larger collaborations with other scientists? Are you struggling to get the feedback you are looking for from your supervisor or peer? Or do you just need to work out with your colleague who can use the laser during the next days? Communication is vital – especially for young scientists – and conflicts cannot always be prevented.

In this course you will learn skills which help you to efficiently communicate with colleagues and supervisors, e.g. to define common levels of expectation and to prevent conflicts. We will discuss further how to resolve conflicts if they occur, or how to minimize their negative outcome.
