

IMPRS UFAST skills course

Leadership and Career Development for PhD Students

Alexander Britz

The workshop goal is to facilitate a successful transition from PhD or postdoc to senior scientist or the dream job outside academia. Advancing as a scientist, both out- as well as inside academia, comes with increased leadership responsibilities.

In the first half of the workshop, we determine as a group the traits of “a good leader” and further practice these traits interactively. As a first step in developing a career strategy the participants determine their personal set of values as well as their short- and long-term career goals. These are then implemented in a career development plan.

We further practice self-presentation, networking skills, pitching and storytelling techniques specific for career advancement.

25th – 26th April 2022

9:30 -16:30

Register on Geventis: I-UF CD
